

It Starts With Plants & Water

Wednesday - January 3, 2018

You cannot go fishing without some sort of habitat, which is a place where plants and animals live. For this day camp, campers will explore the wonderful world of plants and why they are necessary for fish to survive. Water quality is also important in keeping both aquatic habitats and fish stocks healthy, so campers will test different water sources to determine the health of our local waterways.

Daily Activities
Welcome & Introduction
Casting, Knot Tying, & Dehooking
Fishing Safety/Baiting (Snack)
Fishing
Lunch
Water Chemistry
Sweep Away (Game)
